Cut-Check – a tool with amazing insights

The first visualization application for the professional graphical representation of all process-relevant information directly from the control system. For greater transparency in value creation!

Cut-Check – the ECG of machining

Our **Cut-Check** program revolutionizes the analysis of production processes by generating a clear visualization of workflows using real-time data. This visualization not only enables a more comprehensive understanding of process dynamics but also allows for the precise identification of weak points and the determination of optimization potential.

With **Cut-Check**, you gain a holistic insight into your manufacturing processes and can effectively implement measures to enhance efficiency and quality.

-  Clarification of cutting forces
-  Tool Comparison
-  Detect Feed Reserves
-  Analyzes NC Programs
-  Detect Machining Tips
-  Analysis after tool or machine crash

BLACKBOX

Optimize your production reliability with our innovative Black Box!

A tool or machine crash can lead to expensive repairs and significantly disrupt your production processes. Our intelligent Black Box gives you key insights into the causes of such incidents.

The Black Box records and analyzes the specific indications that led to a crash. This provides you with valuable information and allows you to proactively identify possible vulnerabilities.

Take the right measures to prevent future machine accidents. Protect your investments and optimize your operations. Prevent expensive downtime and maximize the efficiency of your production!

Invest in the future of your machines and rely on our black box – for safe and smooth production processes!
